

Transporter Connector Studio™ 4.0

Web component generator for SAP integration

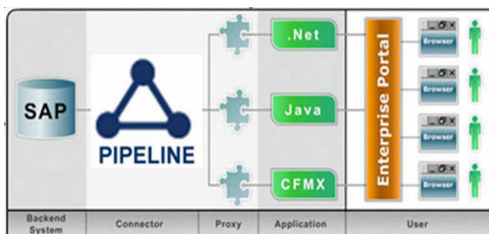

Challenge | data integration with non-SAP systems

Moving data into and out of SAP from non-SAP environments and applications can be challenging and expensive. Extraordinary amounts of developer resources can be consumed on this seemingly simple task, contributing to project delays and budget overruns. Even after a solution is finally working it is often complex and more expensive to maintain than it was to develop.

Simple solution | web interface generator

Pipeline Software's Transporter Connector Studio™ (TCS) is a code generator that creates a collection of web components for SAP BAPI/RFC with a few clicks. These components include REST and SOAP web services, ready-to-run HTML pages, and Java beans that can then be utilized by any other web capable systems in your enterprise.

High utility | useful for projects across the enterprise

TCS components can be readily used in a variety of different applications and projects, including:

- SAP-data powered web portals
- SAP data loading and data migration
- Connecting non-SAP applications to SAP
- Connecting mobile devices to SAP data
- SOA initiatives
- Data warehousing and ETL projects
- Connecting ecommerce storefronts to SAP data

Easy to use | developer productivity in an hour

A average skilled java developer can install TCS and start generating working interfaces in less than an hour.

High performance | RAM cached native data structures

Pipeline's TCS technology is known for its high performance. TCS utilizes a very light weigh architecture and performance oriented design techniques such as in memory data management and object caching that ensures the most efficient processing and execution speed.

Proven | millions of SAP transactions processed

Since 1999 Pipeline TCS technology has reliably processed millions of data transactions into and out of SAP for some of the world's leading companies including Aventis, BP, CenturyTel, Ericsson, IBM, Moen, NEC, and Volkswagen to name a few.

SAP certified | certified integration by SAP Labs

Pipeline's TCS is one of the most long standing SAP integration technologies in the market. As one of the first SAP web enablement technologies it was originally certified in 1999 and most recently certified in 2008 for SAP Business Suite ECC 6.0 environments.

Enterprise compatible | runs on all leading platforms

TCS is a standards based Java J2EE technology. It can be deployed on all leading operating systems and J2EE compliant infrastructure platforms including SAP NetWeaver, BEA WebLogic, IBM WebSphere, TIBCO, and Apache Tomcat.
