Integration Solutions for SAP®

Pipeline Transporter™ for Microsoft® Project Server

Packaged solution for SAP PS/PM-Microsoft Project integration

Pipeline Transporter extends the SAP® Business Suite to seamlessly integrate Microsoft Project Server with SAP Project System (PS) and Plant Maintenance (PM) modules. With hundreds of out-of-the-box field mappings and integration rules this solution can be quickly implemented to streamline key business processes and activities for projects and plant maintenance.

Easy to install | running in days

Pipeline Transporter can be installed and configured in a few days for basic SAP-Microsoft integration scenarios. Even the most complex integration scenarios can usually be addressed in a matter of weeks thanks to Pipeline Transporter's straight forward architecture and robust collection of prepackaged functionality.

Easy to use | completely web based

Pipeline Transporter is completely web based, so whether you are an administrator or regular user you can access the application from anywhere using only a web browser. Users can perform quick ad-hoc synchronizations between SAP and Microsoft Project, schedule jobs to run in the future, administer the system or configure integration scenarios using their web browser.

Easy to support | from easy to effortless

Pipeline Transporter's J2EE compliant standards-based technology means it runs on your existing infrastructure and uses languages and tools already supported by your organization. Additionally, with more than a decade of experience in supporting mission-critical production systems, Pipeline offers a range of unique support plans ranging from basic remote monitoring to full outsourced solution management – reducing your company's support effort by 95%.

Flexible pricing | get started for less

Because each company's integration needs vary so widely Pipeline offers a variety of integration packages (iPacks) designed to meet the functional and budgetary requirements of your business. Customers can satisfy basic SAP-Microsoft Project integration using our Pipeline Express iPacks starting at \$30,000 or select our sophisticated enterprise solution to address global multi-plant and project integration requirements.

SAP Project expertise | smart technology

Technology alone rarely solves a business problem. This is especially true when it comes to cross-system process integration. It is Pipeline Software's deep understanding of SAP project and plant modules and the business processes they facilitate that makes our solution exceptional. We have packaged this knowledge into a software product that conveys years of our experiences to your organizations the moment it is installed.

Integration experts | a decade of success

Pipeline Software has provided enterprise application integration (EAI) solutions for more than ten years. We know what works and what doesn't. Our solutions are trusted by some of the world leaders in defense, aerospace, oil & gas, nuclear power, chemical, mining & minerals, construction, semiconductor and high-tech manufacturing industries. Our experienced team of experts will ensure your integration project is a success.

Complete solution | hundreds of predefined fields

Pipeline Transporter provides hundreds of out-of-the-box predefined fields, mappings and integration rules. While its standard functionality accommodates the majority of integration scenarios, Pipeline Transporter's configuration tools provide literally unlimited flexibility to automate the most complex integration scenarios imaginable.

High performance | thousands of updates per minute

Performance is critical to any cross-system business process integration solution. When you make changes in SAP Projects or Work Orders those changes must arrive in Microsoft Project in seconds or minutes – not hours. Pipeline Transporter provides one of the highest performance data transfer engine on the market, capable of transferring and updating thousands of data fields per minute.

SAP compliant | uses SAP interface standards

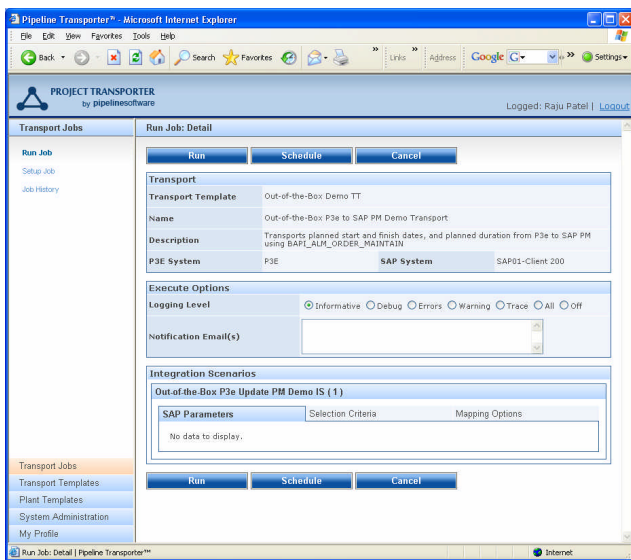

All Pipeline integration solutions leverage the Pipeline Transporter Connector Studio™ (TCS) product when it comes to moving data in and out of SAP. TCS is an SAP Certified Integration. As one of the first SAP Certified web data integration technologies TCS ensures past and future compatibility with SAP releases.

No hidden middleware costs | lower cost of ownership

Many SAP integration solutions require licensing of expensive third party middleware products such as BEA, WebMethods, or TIBCO. Over the life of your solution these technologies can add hundreds of thousands in additional licensing costs. Pipeline Transporter is a completely self contained application that incurs no middleware costs whatsoever.

Platform agnostic | runs on all leading platforms

Pipeline Transporter is a fully compliant Java Enterprise J2EE application. It can be deployed on all leading operating systems and J2EE compliant enterprise infrastructure platforms including SAP NetWeaver, BEA WebLogic, IBM WebSphere, or Apache Tomcat (free). *See supported technologies.

Pipeline Transporter is 100% web based. Users access a single web interface for ad-hoc synchronizations, job scheduling and administration.

Supported technologies | products & versions

Pipeline Transporter currently supports the following products and versions :

SAP R/3

- 4.6c, 4.7, ECC 5.0, ECC 6.0

Microsoft Project Enterprise

- Microsoft Project Server 2007

Application servers

- SAP NetWeaver WAS 7.0
- BEA WebLogic 9, 10
- IBM WebSphere 5.0, 6.x
- Apache Tomcat 6.x

Databases

- Oracle 9i, 10g, 11g
- Microsoft SQL Server 2005
- MYSQL 5.x

Operating systems

- Linux, IBM AIX, Sun Solaris
- Microsoft Windows XP, NT Server

About Pipeline Software | SAP Integration

Pipeline Software Inc., the SAP Integration Experts, provides companies with a better way to connect their non-SAP applications with SAP. Focused exclusively on SAP connectivity and cross-system integration, Pipeline Software offers a suite of software tools, products and services that make it quicker, easier and more effective for customers to integrate their non-SAP applications with SAP. More than 200 global and midsize corporations rely on Pipeline Software to reduce the risk and increase the performance of their mission-critical integrations.
