

Integration Solutions for SAP®

Pipeline Portal Views™ for SAP PM

A simplified web interface for SAP® Plant Maintenance (PM)

Pipeline Portal Views™ for SAP PM provides a radically simplified user experience for the SAP Plant Maintenance (PM) module by delivering a collection of easy-to-use web interfaces for key SAP PM transactions such as work orders, operations, notifications and confirmations.

Overview

Portal Views for SAP PM delivers an out-of-the-box collection of simplified web interfaces to create/update/view key SAP PM transactions and objects including; work orders, operations, notifications, confirmations, equipment, FLOCs, projects, and activities.

The web standards based architecture of Portal Views for SAP PM enables it to be access by any browser including desktop computers, laptops, portals or web-capable mobile device.

Increase SAP user adoption

The key to success and ROI for your SAP investment is user adoption, which in turn drives the promise of SAP—business process improvement. By providing a quick and easy way to update and view SAP PM data, Portal Views for SAP PM makes the user's jobs easier, increasing user satisfaction with SAP PM and promoting adoption.

Slash SAP user training costs

Less complexity means less training. Portal Views for SAP PM screens only show the fields your users need to perform their job, and all screens can be accessed with a couple mouse clicks from any standard web browser.

Increase SAP user productivity

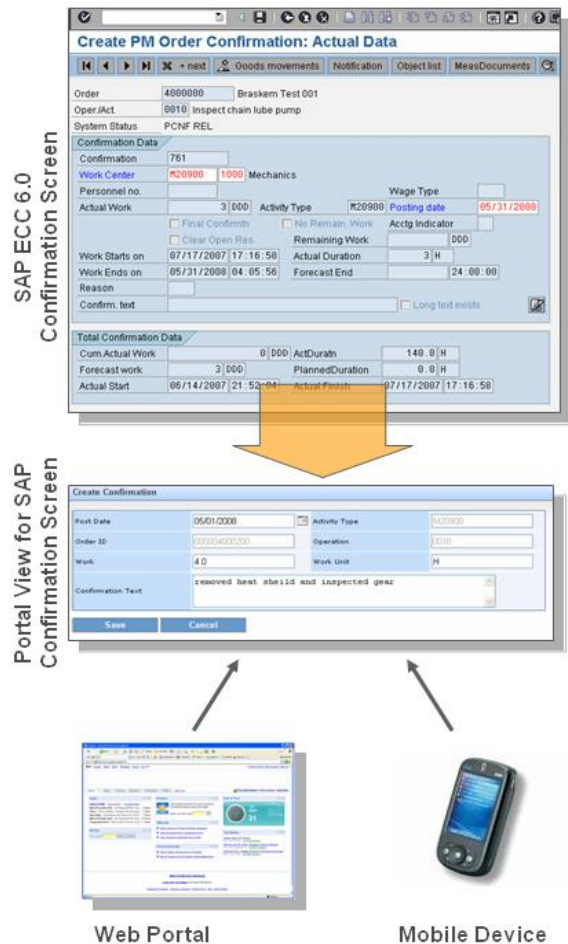

Because users can quickly get to exactly the information they need and data entry time is substantially reduced, Portal Views for SAP PM will free up valuable time every day for every person that uses it to perform their SAP PM updates.

Completely customizable—without touching SAP

Portal Views for SAP PM interacts with SAP through an SAP-certified BAPI/RFC layer, but is otherwise stand-alone from SAP. This means you can customize your Portal Views for SAP PM screens without the risks that come with making changes to SAP.

Low total cost of ownership

Like all Pipeline Software products, the Portal Views for SAP PM solution is built on industry standard Java J2EE technology and takes full advantage of leading open source technologies. Pipeline's architecture strategy provides customers with the highest performance, most secure, easiest to support solution possible.

Supported technologies

The following products and versions are supported:

SAP R/3

- 3.1i+, 4.6, 4.7, ECC 5.0, ECC 6.0

Operating systems

- Linux, IBM AIX, Sun Solaris
